

Plan Header

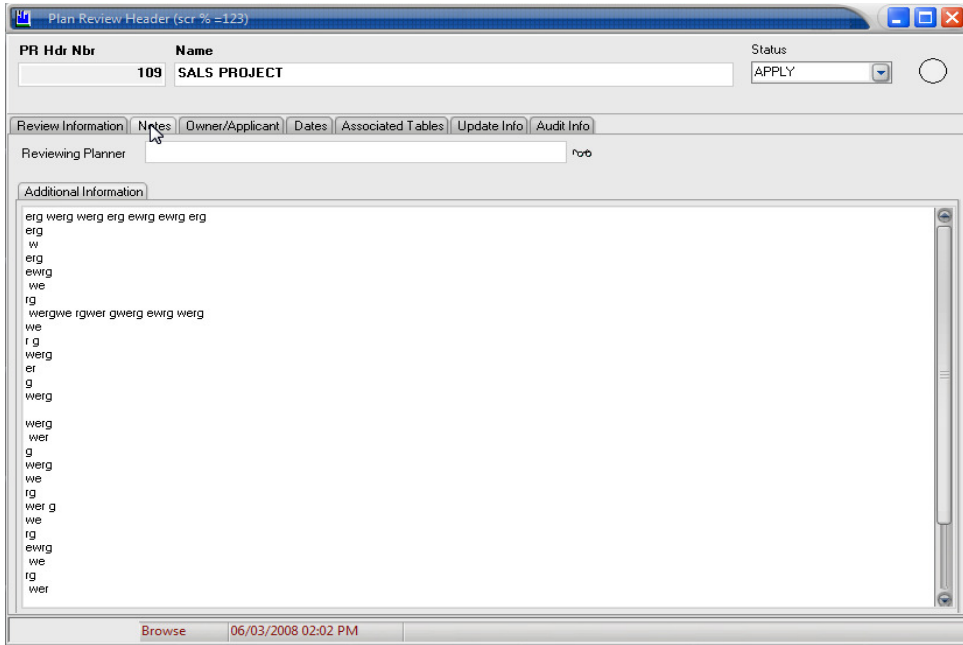

The Plan Header module integrates with the Plan Review subsystem within CD-Plus to allow users to define and record departmental reviews without actually starting the process of a specific permit or a specific application request.

It is a mechanism to perform reviews prior to the application for permits or prior to the first stages of development review. It does not require a property or address connection. It does allow for fees to be collected for the review process.

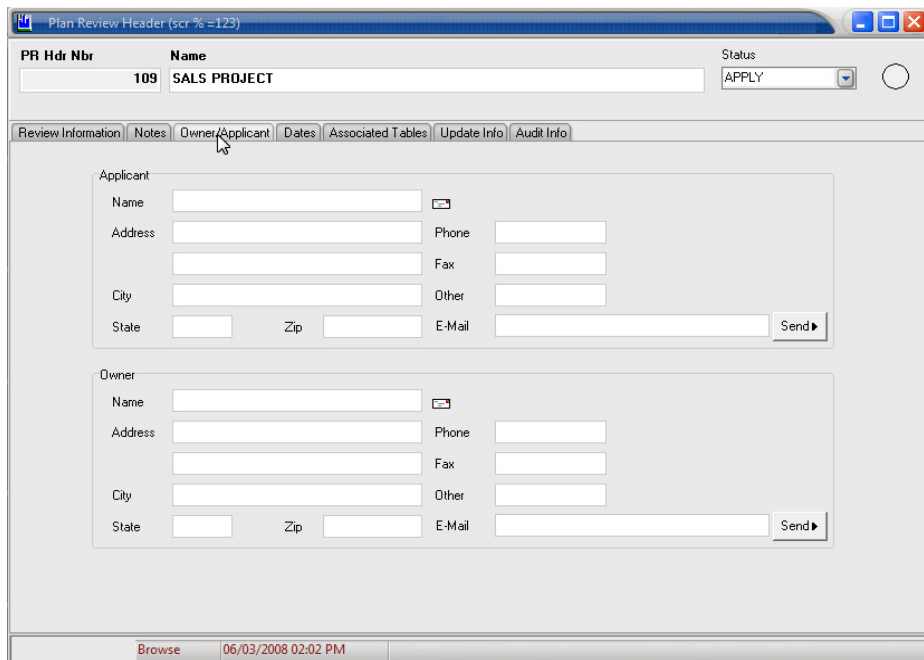

The first screen allows for the entry of HEADER info such as a general location, number of lots or acres, etc. It also allows the specification of an expiration date and show the number of total and pending reviews. It also totals the review time for this header.

Plan Header

The second tab allows for the free form entry of notes with respect to this HEADER.

The next tab collects information about the owner and applicant.

Plan Header

Finally, the Associated Tables tab shows the reviews that are connected to this HEADER. The reviews themselves are the exact same reviews (screens and processes) and checklists that are available under the Permit or Application Request screens.
